## Why Foundation Level Certification?

The Foundation Level qualification is aimed at professionals who need to demonstrate practical knowledge of the fundamental concepts of software testing. This includes people in roles such as test designers, test analysts, test engineers, test consultants, test managers, user acceptance testers and IT Professionals.

## Foundation Level Learning Objectives:

- Use a common language for efficient and effective communication with other testers and project stakeholders.
- Understand established testing concepts, the fundamental test process, test approaches, and principles to support test objectives.
- Design and prioritize tests by using established techniques; analyze both functional and non-functional specifications (such as performance and usability) at all test levels for systems with a low to medium level of complexity.
- Execute tests according to agreed test plans, and analyze and report on the results of tests.
- Write clear and understandable incident reports.
- Be familiar with different types of testing tools and their uses; assist in the selection and implementation process.

## Course Contents:

As prescribed by ISTQB.

## Trainer Profile:

Faculty has twenty years of experience in the I.T. industry spanning across development, testing, training and consulting. He has trained over 3000 senior testing professionals and 4000 campus minds on requirements and software testing related areas in many leading companies in the last twelve years of his training and consulting career.

He has conducted more than 500 workshops in his career on the above said topics and for laterals and campus minds with consistent encouraging feedback in both classroom and online modes.

He has trained over 1500 individuals on ISTQB related certifications and more than 85% of the individuals have cleared the tests. He is certified on ISTQB Foundation level, Agile Tester extension, Advanced Test Analyst and Advanced Test Management certifications.
